# **VISION PRO**

## "Vision Pro", A Feature-Rich Analytical and Trading Platform

#### A highly attractive feature that traders love to tout about Vision Pro is that it includes charts, charting analytics, an order entry screen, live account review and quotes, all organized and easy to use on one screen. Consequently a trader does not lose valuable time in executing a trade, jumping from one screen to the other!

- ?? Vision Pro is a direct access ("level 2") trading platform with depth of the market capabilities. A trader can see all the volume and liquidity of the entire market at a single glance. Furthermore, orders can be routed directly to ECN's and exchanges, bypassing Wall Street's expensive middlemen—"the market makers." The bypassing of the "middle man", and the ability to select the best bid and ask prices can potentially provide better fill prices!
- ?? Seamlessly integrates direct-access stocks, direct-access stock options, and electronic futures trading on one platform.
- ?? Vision Pro is designed and built with numerous, user-friendly and vital features which include several customized real-time quote pages, several order entry pages, and an extensive mark to market account status and summary which includes open, closed, and executed trades.
- ?? Traders can view their accounts continuously updated, live, which also includes commissions.
- ?? Traders have flexibility with Vision Pro. Generally speaking, the trader will download a stable graphical user interface onto the hard drive of his/her home computer and as well as their office computer. Furthermore, for those traders who have internet security/firewall issues at work and traders who travel, Vision also provides free access to Vision Investor, a browser-based platform. Vision is committed to providing solutions for the needs of all our valued self-directed traders.
- ?? Charting capabilities have numerous analytical studies and features. Also, charts are programmed in user-friendly C++ language.
- ?? Although Vision has formatted several user-friendly windows, the trader is welcome to format and create a custom Vision Pro. For example, if the user desires to have three depth of market windows open simultaneously, the software provides for this important function.

- ?? Monthly software costs are priced at only \$50.00 per month, substantially less than many direct- access platforms that charge from \$100.00 to \$500.00. The \$50.00 includes free Level 1 live NYSE, Amex, NASDAQ, Globex traded futures such as the E-Mini S&P, and all stock option quote fees. Furthermore, these monthly software charges are **waived, and subsequently FREE**, for the investor who maintains an average cash futures account balance of \$100,000 or who executes any monthly combination of either 100 stock trades, stock option trades, or round-turn futures trades. Even if a trader didn't meet the requirements for free usage, paying \$50 for Vision Pro's live quotes, charting capabilities with numerous analytical studies and features, alone, not to mention Vision Pro's other valuable features, is a great deal! Besides being substantially less than the cost of what many other direct-access platform's monthly cost is, it is also less than what a trader would have to pay to get live quotes and charts from other services! If there ever was a valuable futures product where traders get more for less, we strongly believe it would be Vision Pro!
- ?? In the unlikely instance of any difficulty, unlike many other brokerage firms that charge a fee, all users of Vision Pro have free access to Vision's Order Desk.
- ?? Vision Brokerage Services, LLC, an affiliated broker-dealer, has established an eye-opening stock and stock option commission rate to attract the high-volume trader who desires to trade stocks, stock options, and futures on one platform. Also, a feature which is generally not available to the individual investor, an accountholder who directs stock orders to certain ECN's and the Archipelago Exchange and adds liquidity to the market will receive direct rebates of up to \$2.00 per 1,000 shares traded, deposited into their account on the transaction day. Ask your Vision Introducing Broker for more details.
- ?? Vision Pro provides clients the ability to trade in the ever popular exchangetraded products (ETF's), such as the QQQ's, Spiders, Diamonds, and all other traded securities and security option contracts.
- ?? Although Vision Pro is easy to understand and use, each account is provided, if necessary, eager to please, expert technical assistance in helping with Vision Pro's installation and usage!
- ?? Self-directed traders will have the ability to receive a free demo of Vision Pro, Email Steve Giangrasso, Electronic Trading Liaison, at <u>smg@tradewithvision.com</u>, for your **FREE** demonstration of Vision Pro! When requesting your free Vision Pro Demo it is necessary to include the name of your Vision Introducing Broker.

## Vision Pro's Level II/Depth of Market Screens

The Vision Pro application provides the user with 2 advanced views of the market.

Here is the Level II view of the Vision Pro platform:

2		_

Here is the Depth of Market view of the Vision Pro platform:

The last price of the market is highlighted in green. The Bids are highlighted in blue with the number of traders at that price and the offers are highlighted in red with the number of participants at that price.

### Charting Advantages

The charts on Vision Pro are offered in a real-time mode giving the user the ability to make more meaningful trading decisions. The volume is also provided below the chart.

Along with real-time prices of the market, the charts provide the technical trader with an arsenal of valuable choices to analyze the markets. Day traders have found the numerous choices highly helpful in their trading.
